Interpretation groups

Smart View elements

Visualization system. Composed of latest technological software, visual devices and servers adapted to your particular requirements.

Service. This is an essential part of the solution to support the correct use of the system and ensure that your company can take full advantage of the benefits of Smart View.

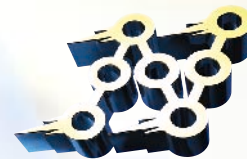

Technical and service solution to expedite work flows and information in a collaborative environments conformed by different multidisciplinary groups

Smart View provides a means for work groups in exploration-production areas of collaborating in the interpretation, supported by a SVC type solution. In this way, a number of people of varying disciplines in different geographical regions will have access to the revision and validation processes in the actual place where the final results and information are being generated. Therefore, considerable savings can be achieved by avoiding transferring personnel to specialized installations, by accelerating the work flow and decreasing the time needed to develop an interpretative project

Therefore, a Smart View solution could become a powerful tool for interactive interpretation centers, or by having the capacity to visually measure 'in situ' and an interactive means for on the job collaboration to share and distribute findings by remote, to accelerate decision making and to reduce the time necessary to develop a project.

Therefore, a Smart View solution could become a powerful tool for interactive interpretation centers, or by having the capacity to visually measure 'in situ' and an interactive means for on the job collaboration to share and distribute findings by remote, to accelerate decision making and to reduce the time necessary to develop a project.

Benefits

BENEFITS:

- Efficient Solution to share knowledge, optimizing analysis time without leaving your work place.
- Immediate visual access to large amounts of data, regardless of their venue and that of the person using them.
- An team work environment between individuals and disperse groups supported by VAN (Visual Area Network)
- An environment of collaboration supported by visual tables and powerful servers.
- An advanced solution to send and distribute high resolution video.
- A low cost visualization service and team work, compared to a projection hall.

Smart View Solution focus

focus

As this is a technological proposal to provide alternative interactive visualization, its application is directed to those sectors of the market that produce large quantities of graphic information which demand solutions geared to accelerate the decision making process. By having a more efficient way of sharing the feedback generated, the time required to develop projects will be optimized.

Sectors -industrial and others, which could benefit from this solution, are:

Energy

Manufacturing

Government

Statistics, among others

Houston, Texas (USA)
34 S. Wynden Drive, Suite 220
Houston, TX 77056-2531
Tel. (713) 464 70 77

Mexico City
Ejército Nacional No. 418
Office 508
